Abstract. This is a detailed Technical Analysis Report supplementing the original paper on Codd's World: Topics and their Evolution in the Database Community Publication Graph.

1 Topic Overview

At its core, our analysis is based on the global 30 topics extracted over all the years from the dataset. The 30 topics including their words and giving them a representative meaningful name are,

- 0. **Numerical Methods:** method proposed method proposed methods based new using method based results estimation
- Applications: research social study design analysis knowledge technology use human online
- 2. **Networking:** network networks nodes routing wireless traffic sensor node protocol neural
- 3. **Optimization:** problem problems optimization solution optimal solutions linear set solve function
- 4. **Data Mining:** data mining data sets data mining sets clustering analysis large database query
- 5. **HCI**: performance memory parallel applications high architecture design hardware implementation processor
- 6. **Modeling And Simulation:** model models modeling parameters based process model based simulation proposed model markov
- 7. **Communication:** channel signal interference frequency noise channels rate performance multiple error
- 8. **Operating Systems:** system proposed system design based developed paper system performance using monitoring describes
- 9. **Cognitive Learning:** learning students machine machine learning training learn neural student knowledge supervised
- 10. **Semantic Web:** web search semantic query web services pages content services queries documents

- 11. **Algorithms:** algorithm algorithms proposed algorithm proposed search based algorithm based clustering new genetic
- 12. **Energy:** energy power consumption energy consumption sensor power consumption voltage low efficiency energy efficiency
- 13. **Logic Programming:** language logic languages object semantics programming knowledge programs program semantic
- 14. **Image Processing:** image images segmentation color 3d object visual resolution regions objects
- 15. **Cloud Computing:** service services cloud qos computing management quality business resource resources
- 16. **Cryptography:** scheme proposed schemes proposed scheme based coding propose signature simulation key
- 17. **Control Theory:** control robot controller robots motion feedback tracking stability loop nonlinear
- 18. **Network Analysis:** graph graphs vertices vertex number edge edges set connected tree
- 19. **Time Series:** time real real time scheduling time series series delay space temporal varying
- 20. **Software Engineering:** software development engineering process software development design requirements project tools hardware
- 21. **Machine Learning:** features classification feature recognition speech accuracy classifier training detection based
- 22. **Video Processing:** video motion quality coding frame videos frames content 3d temporal
- 23. **Decision Support:** fuzzy decision rules sets rule logic clustering set neural controller
- 24. **Testing:** test testing fault faults detection tests coverage circuit circuits generation
- 25. **Security:** security protocol attacks secure key attack authentication protocols privacy encryption
- 26. **Distributed Systems:** agent agents distributed multi communication complex information systems state based
- 27. **Block Coding And Decoding:** codes code error decoding coding source binary rate length block
- 28. **Information Retrieval:** information retrieval information systems knowledge sources context documents text document available
- GPS Navigation: user users mobile devices interface interaction device mobile devices location access

2 Research Questions

The below research questions are answered through analysis on the network data:

- **RQ**₁: How did topics evolve in their popularity through time?
- RQ₂: Which are the most cited papers per topic per year? (with and without self-citations)

- RQ₃: Which is the most influential paper per topic per year? (with and without self-citations)
- RQ4: How many citations per topic per year? (with and without self-citations)
- **RQ**₅: Who is the most important author per topic, looking at collaboration only, citation only, and mixed? (with and without self-citations)

2.1 Evolution of Topics Through Time

Relevance: Visualizing topic evolution depicts the popular research topics, measures topic change over time, merge or split of a topic, increase or decrease of importance for a topic and other topic evolutionary characteristics, thus helping to better understand the research trend in the database field.

Results and Discussion: Fig. 1 shows the evolution of the identified 30 topics over the years. It is seen from the figure that Topic 1 (named as Numerical methods) has seen a steady evolution over the years, with its highest evolution in the year 2018, whereas Topic 15 (named as Cloud Computing) had the highest evolution in the year 1965 and is not visible in the year 2018. Similarly, we can visualize other topics which have evolved or suddenly disappeared over the years. Additionally, Fig. 2 shows the non-overlapping 30 topic assignment in the form of clusters. This figure merely illustrates that each paper is assigned to a single topic.

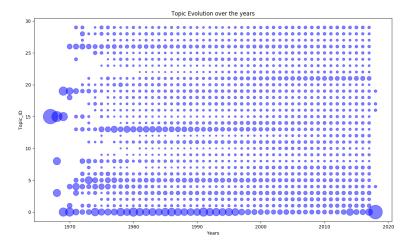

Fig. 1: Evolution of Topics Through Time

2.1.1 Top Citations per Topic per Year

4 Pawar et al.

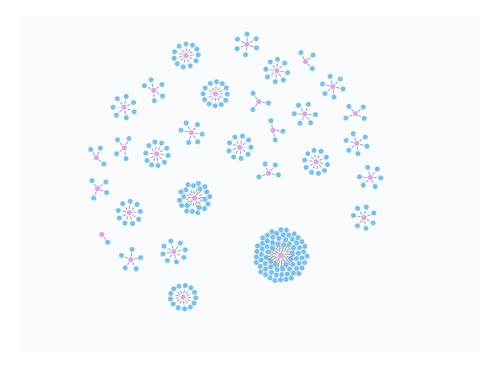

Fig. 2: Non-Overlapping Topic Assignments

Relevance: Understanding the most cited papers helps to measure the overall scientific impact made by the paper. Recognizing the most cited papers per topic per year facilitates deep analysis through measuring the trends in the scientific impact along the years.

Results and Discussion: The below Cypher query returns the most cited papers for a particular year with self-citation,

```
MATCH(p:TopicDescription) -
[:Topicality] -> (s) <- [rel:CitationWithSC] - (r Year: "1970")
RETURN (s.Title), (p.TopicName), COUNT(rel)
ORDER BY COUNT(rel) DESC LIMIT 100;</pre>
```

Tables 1 and 2 summarize the query output for the years 1970 and 2017.

The below Cypher query returns the most cited papers for a particular year without self-citation,

```
MATCH(p:TopicDescription) -
[:Topicality] -> (s) <- [rel:CitationWithoutSC] - (r Year: "1970")
RETURN (s.Title), (p.TopicName), COUNT(rel)
ORDER BY COUNT(rel) DESC LIMIT 100;</pre>
```

| Tile | TopicName | Count |
|--|------------------|-------|
| A Survey of Analytical Time-Sharing Models | NumericalMethods | 3 |
| A relational model of data for large shared data banks | DataMining | 3 |
| Optimizing the Performance of a Drum-Like Storage | TimeSeries | 2 |
| Principles of Optimal Page Replacement | Optimization | 1 |

Table 1: Most cited papers in 1970 with self-citation

| Title | TopicName | Count |
|---|-------------------|-------|
| ImageNet Classification with Deep Convolutional Neural Networks | Testing | 736 |
| Caffe: Convolutional Architecture for Fast Feature Embedding | CognitiveLearning | 734 |
| LIBSVM: A library for support vector machines | MachineLearning | 585 |
| Distinctive Image Features from Scale-Invariant Keypoints | MachineLearning | 573 |
| Very Deep Convolutional Networks for Large -Scale Image Recognition | MachineLearning | 562 |
| Random Forests | MachineLearning | 540 |
| Distributed Representations of Words and Phrases and their Compositionality | CognitiveLearning | 490 |
| Histograms of oriented gradients for human detection | MachineLearning | 449 |
| Image quality assessment: from error visibility to structural similarity | ImageProcessing | 407 |
| Batch Normalization: Accelerating Deep Network Training by Reducing Internal Covariate Shift | MachineLearning | 406 |

Table 2: Most Cited Papers in 2017 with Self-Citation

6 Pawar et al.

Tables 3 and 4 summarize the query output for the years 1970 and 2017.

| Title | TopicName | Count |
|--|------------------|-------|
| A Survey of Analytical Time-Sharing Models | NumericalMethods | 3 |
| A relational model of data for large shared data banks | DataMining | 3 |
| Optimizing the Performance of a Drum-Like Storage | TimeSeries | 2 |

Table 3: Most Cited Papers in 1970 without Self-Citation

| Title | TopicName | Count |
|---|-------------------|-------|
| ImageNet Classification with Deep Convolutional Neural Networks | Testing | 736 |
| Caffe: Convolutional Architecture for Fast Feature Embedding | CognitiveLearning | 734 |
| LIBSVM: A library for support vector machines | MachineLearning | 585 |
| Distinctive Image Features from Scale-Invariant Keypoints | MachineLearning | 573 |
| Very Deep Convolutional Networks for Large-Scale Image Recognition | MachineLearning | 562 |
| Random Forests | MachineLearning | 540 |
| Distributed Representations of Words and Phrases and their Compositionality | CognitiveLearning | |
| Histograms of oriented gradients for human detection | MachineLearning | 449 |
| Image quality assessment: from error visibility to structural similarity | ImageProcessing | 407 |
| Batch Normalization: Accelerating Deep Network Training by Reducing Internal Covariate Shift | MachineLearning | 406 |

Table 4: Most Cited Papers in 2017 without Self-Citation

Comparing the tables for the years 1970 and 2017 for with and without self-citation, it is observed that majority of the returned papers with their topics are the same in both the queries. This suggests that the top papers returned do not achieve their most cited criteria through self-citation. Additionally Fig. 3 depicts the top 200 papers cited in the year 2017 with their topic names and without self-citation.

2.2 Top Influence per Topic per Year

Relevance: Measuring the most Influential paper based on its ranking in the network is an indicator of high acceptance of the research work by the scientific community. Understanding the top influential paper per topic per year helps to visualize the trend

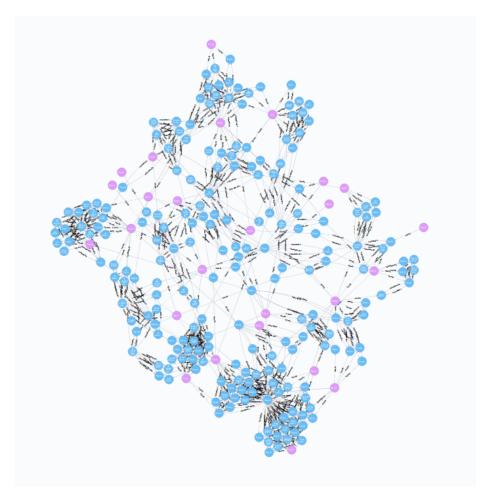

Fig. 3: Top 200 papers without Self-Citations in year 2017

of this acceptance over the years.

Results and Discussion: The below Cypher query returns the 25 most influential papers (based on Page Rank score) with self-citation for all the years,

```
MATCH(p:TopicDescription)-[:Topicality]->(s)
RETURN p.TopicName, s.Title, s.ScoreWithSC AS PR
ORDER BY PR DESC LIMIT 25;
```

Table 5 summarize the query output for all the years. The below Cypher query returns the 10 most influential papers (based on Page Rank score) with self-citation for a particular year,

```
MATCH(p:TopicDescription)-[:Topicality]->(s Year:"1970")
```

Table 6: 10 most Influential Papers (based on Page Rank score) with Self-Citation 1970

The below Cypher query returns the 25 most influential papers (based on Page Rank score) without self-citation for all the years,

```
MATCH(p:TopicDescription)-[:Topicality]->(s)
RETURN p.TopicName, s.Title, s.ScoreWithoutSC AS PR
ORDER BY PR DESC LIMIT 25;
```

Table 8 summarize the query output for all the years.

The below Cypher query returns the 10 most influential papers (based on Page Rank score) without self-citation for a particular year,

```
MATCH(p:TopicDescription)-[:Topicality]->(s Year:"1970")
RETURN p.TopicName, s.Title, s.ScoreWithoutSC AS PR
ORDER BY PR DESC LIMIT 10;
```

Tables 9 and 10 summarize the query output for the years 1970 and 2017. Observation of the tables, suggest that the highest Page Rank is indeed associated with the old papers but is not necessarily always true. As expected, the foundational paper of Edgar Codd on relational databases remains the most influential over all the years (with and without self-citation). The results of this research question cannot be compared with the results of RQ2 as, self-citation makes a difference on the network dynamics (given that Page Rank scores depend on the complete network structure) but not on the citation count of the most cited papers. Furthermore we observe that removing self-

Table 7: 10 most Influential Papers (based on Page Rank score) with Self-Citation 2018

citations leads to a higher range for the scores of the most influential paper, showing that self-citation does indeed make a difference in the scoring. Additionally, Fig. 4 shows the top Influential papers with their topics depicting that most influential papers are cited across topics and have a high Page Rank, leading to the formation of big clusters. The small isolated clustered topics like Communication, Video Processing, Applications, Block Coding And Decoding are disconnected and indicate lower values for Page Rank.

2.3 Citations per Topic Through Time

Relevance: Measuring citation count for a topic helps to understand its research popularity among the scientific community. Analyzing citation count per topic per year helps to measure the relevant trends of research on a topic over the years. Results and Discussion: The below Cypher query returns the citation count for a topic for all the years,

```
MATCH(p:TopicDescription TopicName: "MachineLearning") -
[:Topicality] -> (s) <- [rel:CitationWithSC] - (r)
RETURN p.TopicName, r.Year, COUNT(rel)
AS CitationCount ORDER BY r.Year DESC LIMIT 100;</pre>
```

Table 10: 10 most Influential Papers (based on Page Rank score) without Self-Citation 2017

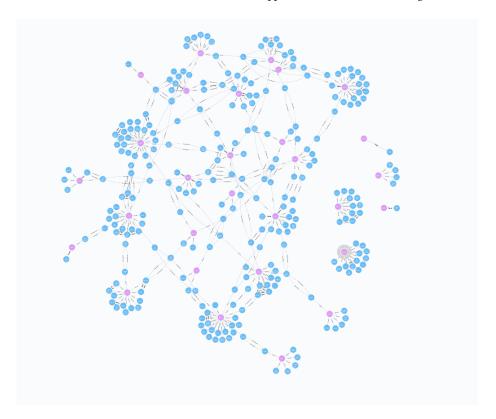

Fig. 4: Top Influence per Topic per Year

Tables 11 and 12 summarize the query output for topic Machine Learning and Data Mining.

Fig. 5 shows a histogram depicting the total citation count per year. Observing the tables indicate an increasing trend for the selected topics Machine Learning and Data Mining over the years. Additionally running the query for other topics identified no significant downtrend for any topic. This could be given the fact that we have not included information regarding distribution of the papers having high citation counts. Power Law analysis [1] can be used to solve this problem by drilling down into papers.

2.4 Top Influential Author per Topic

Relevance: Measuring the top influential author per topic combined and ranked over all the years, helps to understand the popular acceptance of the author's research on a particular topic among the scientific community. It is also an indicator of the valuable contribution made by the author towards the research topic.

| TopicName | Year | CitationCount |

Table 16: Combination of Author Rank and Page Rank with self-citation for Topic Data Mining (25 most Influential Authors)

Table 15 summarizes the query output for Page Rank on all topics without self-citation.

The below Cypher query returns the 25 most influential authors through combination of Author Rank and Page Rank on collaboration/co-authorship network with self-citation for a particular topic,

```
MATCH(p:TopicDescription TopicName:"DataMining") - [:Topicality] ->(s)<-[:Authorship] - (a)
RETURN DISTINCT a.AUTHOR_NAME, a.ARPRScorewithSC AS score
ORDER BY score DESC LIMIT 25;</pre>
```

Tables 16 summarize the query output for topic Data Mining with self-citation.

The below Cypher query returns the 25 most influential authors through combination of Author Rank and Page Rank on collaboration/co-authorship network with self-citation for a particular topic without self-citation,

```
MATCH(p:TopicDescription TopicName:"DataMining") -
[:Topicality] -> (s) <- [:Authorship] - (a)
RETURN DISTINCT a.AUTHOR_NAME, a.ARPRScorewithoutSC AS score
ORDER BY score DESC LIMIT 25;</pre>
```

Tables 17 and 18 summarize the query output for topics Data Mining and Machine Learning without self-citation.

The below Cypher query returns the top most influential authors through combination of Author Rank and Page Rank on collaboration/co-authorship network without self-citation for all topics,

```
MATCH(p:TopicDescription) - [:Topicality] ->(s) <- [:Authorship] - (a)
RETURN DISTINCT a.AUTHOR_NAME, a.ARPRScorewithoutSC AS score
ORDER BY score DESC LIMIT 100;</pre>
```

Table 19 summarizes the query output for 100 most influential authors without self-citation. Observing the tables, it is found that combining Author Rank and Page Rank did not lead to different results in the ranking of authors in comparison to Page Rank alone mostly because the collaboration network had very small weights. Further, it is found that most collaborative authors publish papers in all the topics. The limitation of the dataset should be also noted that some authors may have same names which may result in vagueness of results for ranking authors. Additionally, Fig. 6 shows the collaboration/co-authorship network of Prof. Gunter Saake.

We observe that the ranking of authors on the citation network is more informative than the ranking on the collaboration network.
